For refining, it utilizes top and bottom blown Argon-Oxygen Decarburization (AOD) Converter. In addition, it is also endowed with Vacuum-Oxygen Decarburizing (VOD) unit for achieving very low content of Carbon, Hydrogen and Nitrogen. De-oxidation is carried out by high speed multiple wire-injection units and refined steel is continuously cast in slab and bloom caster.

- Hot Rolled coils are annealed & pickled in continuous Annealing-Pickling lines having scale breaker, shot blasting unit, Electrolytic Sulphuric Acid and Mixed Acid bath. Annealed and Pickled coils are cold rolled in Sendzimer cold rolling mills provided with shape meter for high degree of flatness.
- Annealing & Pickling of cold rolled coils is carried out utilizing Neutral Electrolytic Salt Bath followed by Electrolytic Nitric Acid and Mixed Acid Baths. There is provision of online/offline Skin Pass Mills and Tension Leveler to produce world class lustrous products.
